# TAIPEI (CYCLE) ONLINE March 3-31, 2021

Where the Global Cycling  
Industry Meets

**TAIPEI CYCLE DAILY 1**

# HIGH QUALITY. BEST VALUE.

## BAFANG DELIVERS AN EXCEPTIONALLY HIGH LEVEL OF PRODUCT QUALITY.

The production process is accompanied by continuous quality controls and all components are carefully tested during production. We help you make your e-bike brand stronger.

## TAIPEI CYCLE Online 2021 Show Profile

ORGANIZER	Taiwan External Trade Development Council
EXHIBITION DATES	March 3 - March 31, 2021
MAIN THEMES	<ul style="list-style-type: none"> <li>● Bicycle supply chain: bicycle parts and accessories</li> <li>● Complete bicycles</li> <li>● Overseas exhibitors and international brands</li> <li>● e-Bikes and drive units: e-Bikes, electric motor, battery, electric parts and components</li> <li>● Cycling lifestyle and fashion : cycling accessories, bike tour services, smart cycling services, startups, fashion show, TAIPEI CYCLE+ salon</li> <li>● Country Pavilions: The EU Pavilion, Japan Pavilion, Italy Pavilion and Korea pavilion</li> </ul>
UNIQUE SHOW FEATURES	<ul style="list-style-type: none"> <li>● SAFE: The perfect alternative for business opportunities during pandemic</li> <li>● GLOBAL: The right place to find suppliers and business partners to craft new products for the global market.</li> <li>● NETWORK: Get the latest industry news and market trends.</li> <li>● DIGITAL: A simple user-friendly online platform delivering the best B2B cycling show.</li> <li>● LEARN: Access seminars from key industry speakers from around the globe discussing the challenges and opportunities for the global cycling industry</li> </ul>
ONLINE EXHIBITION	252 exhibitors
EXHIBITORS' COUNTRIES OR REGIONS	China, France, Germany, Denmark, Portugal, Austria, Hong Kong, India, Israel, Italy, Japan, Korea, Netherlands, Cambodia, Taiwan, Thailand, United States... a total of 22 countries/regions
TAIPEI CYCLE KEY EXHIBITORS	Giant, Merida, Ideal Bikes, Darfon (BESV), Shimano, SRAM, KMC, Pacific Cycles, KTM
EVENTS	<ol style="list-style-type: none"> <li>1. TAIPEI CYCLE d&amp;i awards</li> <li>2. Cycling Fashion Show</li> <li>3. Int'l Press Conference</li> <li>4. TAIPEI CYCLE Online Forum</li> <li>5. E-bikes Market Access webinar</li> <li>6. Live Tour: d&amp;i award winners</li> </ol>
THEME PAVILIONS	TAIPEI CYCLE d&i awards Pavilion

## JOE'S NO-FLATS

Punctures still deter people from commuting by bicycle, but sealant-maker Joe thinks he has the solution

Joe's No-Flats aims to provide the bicycle market with the world's most effective anti-puncture sealants. Early into the now huge tubeless tyre market, its product lines include both latex-based and latex and ammonia-free sealants, tubeless solutions and accessories, plus self-sealing tubes and tubeless conversion kits. At the same time, the firm has also recently expanded into nanotechnology-based lubricants, cleaners, and bio-degreasers. Last year the company dedicated significant research and design efforts towards what it considers the fastest growing and most interesting segments in the industry; e-bikes and road tubeless. Sealing a puncture under 110psi of pressure is not the same as sealing one at 25psi. Already experienced in modifying its sealants according to their specific use, Joe's No-Flats was the first firm to introduce a specific road tubeless sealant. It's now applying the same logic to e-bike commuters. Its latest e-bike commute sealant is formulated to be long-lasting, resulting in what its makers claim is the most efficient sealant on the market. Available in workshop size servings, it should help e-bike riders avoid more punctures than ever.

## WILDFIRES TECHNOLOGY

Wildfires Outdoor Products specialises in the design and manufacture of innovative bike lights, computers, and other related accessories. Established by a group of experienced outdoor enthusiasts, all its products are backed by the firm's strong research and design capability and production skills. Its key aim is to provide its customers with a high degree of customisation for their projects along with the support of an experienced sales team. Located in Shenzhen, having started as an original equipment manufacturer, Wildfires Outdoor Products has since built up its own Towild label. Among its most radical products on show this year are the BR1800 headlamp and TL03 rear light. Despite competitive pricing, the first of these includes both a flood and focused beam along with a high capacity battery that can also be used as a power bank to charge other devices. With smart power management, intelligent temperature control, and a low power warning, the design of the BR1800 headlamp also supports the use of a remote switch. Just as smart, at the rear the TL03 offers an automatic braking feature, along with automatic on/off function and LED battery indicator, all of which

are contained in an IPX6 waterproof aluminium housing. In 2021, Towild is also planning to release several new products, including new bike lights and a cadence sensor for its GPS wireless bike computer.

## JOTEX

Recently Jotex's parts have found their way into many of the best electric bicycles. Originally a manufacturer of rubber rollers and parts, as such it has accumulated 30 years of market experience mainly exporting to the European and American markets. However, in 2019, it also became a strategic partner with a well established German company. This collaboration allowed it to first form relationships with carmakers like Mercedes-Benz before pivoting further to become involved in the equally high-tech German electric bicycle sector. Still a 100% Taiwanese owned private company, Jotex now has outposts in both Taiwan and China allowing it flexibility in the face of unexpected circumstances. With the certifications needed to create

products for the strictly regulated European market, Jotex remains happy to accept orders from bike makers of any size. With a wide range of after-sale services, it has also created its own tracing system, allowing clients to follow their product from the beginning of its life to completion, and so ensure

customer satisfaction at every step. With a tooling warehouse, professional testing centre, and advanced lead-time management system, it's able to serve customers of all sizes and remains guided by its purpose to provide even more improvements to both frame and motor systems.

## 720ARMOUR

720armour is a sunglasses brand specially designed for Asian faces. Its product range covers everything from watersports, through cycling, and mountaineering. Having found events in its home base of Taiwan less affected than those in the rest of the world, the firm has nevertheless recently invested in pandemic-proof technology. Having found it difficult to get products into shops in other regions, its latest 5G and augmented-reality programmes let customers virtually trial its sunglasses wherever they are. Also helping digital retailers, its latest Virtual Try-ON app uses people's smartphones to let them virtually try out and snap pictures of the latest styles. At the same time, 720 has built on its existing range. The popular A-Fei and Mars models which serve both athletic and casual use remain, however, they're now joined by a new Flash model. Continuing 720's focus on ergonomic technology and advanced optical development, these performance glasses are equipped with the latest patented technology, allowing for a versatile structure that can be assembled to make either

a whole, half, or rimless frame. Made using an eco-friendly Arkema G850 bio-plastic to reduce the impact on the environment, the enhanced lifespan of this material also improves their environmental

credentials. At the same time, 720 has also just launched sunglasses with frames created from recycled ocean waste. Good news however you choose to look at it.

## SAFETY LABS HELMETS

All of Safety Labs' helmets are created by professional riders with a passion for cycling. Now able to call upon over a decade's worth of product development experience and industry knowledge, its helmets provide high-end features at accessible price points. Aiming to bring fresh style, supreme safety, and the ultimate in performance to the cycling marketplace, it's the sister company of FLR Shoes. Created in close cooperation with professional cyclists around the world, the brand's range spans options to keep riders safe whether they're learning to ride on a balance bike, racing on the road, or just commuting to work. Sitting at the top of Saftey Labs' latest City Series line is the Avex light. Intended as the perfect helmet for commuters, its simple, sleek design includes a huge 21 individual ventilation windows for maximum airflow. Equipped at the rear with a bright LED light, so you'll be visible while riding, and a visor, to protect your eyes from the sun so you can focus on the road, it's both stylish and well-featured. Looking further across Saftey Labs' range you'll find even the brand's cheaper models still include features such as the firm's strong dual-layer PC in-mould construction and Pro 360 Adjustment fit system. Good news for any head.

## DP MOTORS

Originally founded in Japan, in 2018 DP Motors' President, Fumio Kurebayashi, also established a production base in Taichung. Aiming to exploit the potential of Taiwan's bicycle industry, this assembly line is still expanding with the aim of building to an annual output of 30,000 motors. Providing both customization and ODM services, it now produces components for the worldwide market, including in accordance with strict EU regulations. Holding both EN15194 and ISO13849 certification, it specialises in mid-type motors alongside torque sensors and controllers. Having successfully continued operating throughout the recent pandemic, last year DP Motors both improved its production processes and added to its line of products. Among its latest products is the M080MD mid-motor. Able to achieve an efficiency of over 80%, it can supply powerful torque of 80nm with a 350-watt rating. Neatly integrating into the centre of the frame, since its initial success, DP Motors has also launched the smaller M065MD that supplies 60nm with a 200-watt rating. Both silent and smooth, at a svelte 2.5 kilograms this latest model is ideally suited to use on lightweight road or gravel bikes.

## APROVE

Aprove is an e-bike manufacturer committed to producing premium frames at accessible price-points. Founded two decades ago in China, this expert in alloy frame production has since made over 9.6-million (e)bike frames and in the process developed almost 7,000 individual models. With its customer base spanning 26 countries, Aprove aims to provide scale and pricing to help you gain

a decent competitive advantage. Producing everything from radical full-suspension models, to racers with subtly integrated electrical assistance, many of its designs will be familiar to visitors to the show. And with 70% of its clients operating in Europe's mid to high-end market, it's proven a reliable partner for a host of well-known brands. Recently Aprove has been working to make life even easier

for brands and designers. Having invested heavily, its OEM and ODM capabilities have been broadened from concentrating solely on producing frames to now also constructing fully built e-bikes. Allowing it to offer a far wider range of services, its tight-knit supply chain and one-stop operation promises to provide clients with the shortest possible time-to-market.

## YOTA

E-bike specialist Yota is a Taiwanese company with plants in both Taiwan and China. It aims to work closely with its clients to focus on quality electric bike development. Not just a bike assembler, but a collaborative partner, it's set-up to help businesses grow to encompass multiple product lines and extensions. With experience in design, development, and production, its yearly production capacity is currently around 60,000 e-bikes, with an estimated increase to 120,000 from 2024. Set to become a bonded factory in March 2021, Yota is currently working towards the implementation of an automatic storage retrieval system

in the next two years and is currently ISO 9001, TS 16949, and GMP certified. Exhibiting its expertise, several of its designs will be on show this year. Among them is the E City Bike. Easy to step aboard, it's fitted with a Motinova Motor and battery, and can be equipped with Kenda anti-puncture tires and a Shimano Nexus 8-speed hub. The EMTB is a

radical cargo bike that can be made of alloy or cromoly, and fitted with a rear-drive or mid-motor, along with single or twin battery configurations. Also hopping aboard the gravel-riding trend, Yota's Gravel bike features an internal down tube battery, plus generous tire clearance and geometry to make it more stable than a traditional road bike.

## POWUNITY

A telephone rings in Vienna and a stolen e-bike is reported. A short time later, it's located with the help of the BikeTrax GPS-tracker mounted inside the motor housing.

That evening, in August 2018, PowUnity's BikeTrax anti-theft device accomplished its first good deed. Since then the firm has developed a connected-bike-system that's proved a hit with both consumers and e-bike manufacturers. Now also advising e-bike

companies on digitalization and data-driven product development, during the pandemic year, e-bikes received a tremendous push. To keep pace with the competition e-bike manufacturers have to focus on the digitalization strategy of their company. Unsurprisingly, since last year PowUnity has therefore noticed a growing demand for their tracking and service system. Sold through dedicated dealers, PowUnity now has more than 500 specialists in its partner network,

each of which purchases the BikeTrax directly from PowUnity to secure their customers' e-bikes. Available for all common e-bike motors including Bosch, Brose, and Shimano, once installed, it records every meter and notices the slightest unauthorized movement, both indoors and out. In case of attempted theft, the owner is then immediately notified via a motion alarm and a push message in the app. Clever stuff.

## FLR SHOES

Seen on the feet of WorldTour riders including Ben King, Clement Chevrier, and Mikael Delage, FLR makes a range of race-focused cycling shoes. Designed in collaboration, each is made in close cooperation with professional cyclists around the world. Besides this, the

sibling brands producing pedals, shoe covers, and helmets. At this year's show, FLR is keen to promote its latest Knit Series. This new range sees its most popular shoes remastered with a triple layer of extra-strong nylon yarn. Composing the shoe's XD-KNIT upper, this mesh-

like fabric is super breathable to help keep the rider's feet cool, yet remains durable enough to secure them in place while resisting any unwanted stretch. Producing footwear tailored to a range of cycling demographics, FLR caters to everything from gravel in the form of its F-70 model, to elite road racing via its top-end F-XX shoes. Across its various ranges FLR employs the sort of technology now demanded by athletes and more casual riders alike. From features like full carbon soles, Vibram grippers, or the use of ATOP lacing systems and buckles, each shoe is designed and created to give its wearer the best experience possible.

company's portfolio includes

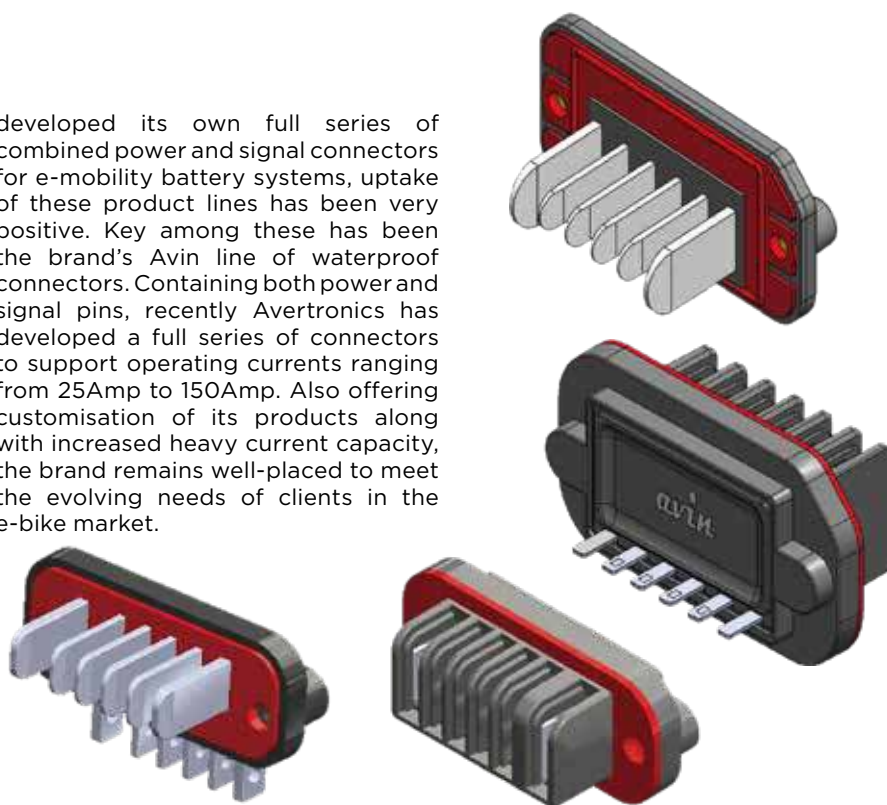

## AVERTRONICS

**Keep your e-bike systems talking to one another with multi-function cabling from specialists Avertronics.**

Established in 1987 Avertronics specialises in the design and manufacture of waterproof connector and wire harnesses. Able to offer customers a high-quality product with a fast lead time, the firm boasts significant inhouse design capability, along with 3D print sampling, 3D moulding analysis, and product qualification services. Thanks to its strong development capability, Avertronics has been well placed to capitalise on the recent growth of the e-bike market. Ready to deliver its services at an affordable cost to the global market, to achieve this it's established multiple production sites in China, Thailand, and Taiwan. Between them, these include production lines dedicated to over-moulding, multiplex process automatic cable and wire assembly, along with efficient tooling and applicator solutions. Having

developed its own full series of combined power and signal connectors for e-mobility battery systems, uptake of these product lines has been very positive. Key among these has been the brand's Avin line of waterproof connectors. Containing both power and signal pins, recently Avertronics has developed a full series of connectors to support operating currents ranging from 25Amp to 150Amp. Also offering customisation of its products along with increased heavy current capacity, the brand remains well-placed to meet the evolving needs of clients in the e-bike market.

## HCT

HCT specialises in the production of turned OEM bicycle parts. Established in 1991, it's grown from just a trio of staff to now employ over 60 personnel. Committed to providing cost-effective solutions alongside a fast production turnaround, unusually it's

also able to export world-wide without a minimum order quantity. Serving both domestic and foreign customers, along with national governments, it possesses significant in-house production expertise gained over 30 years in business.

Producing precision components according to clients' drawings, HCT retains significant capability thanks to its large suite of production machines. These include five Japanese-made Tsugami Swiss-type CNC machines, six turret-type CNC machines, 24 CAM machines, and 21 NC machines. With regards to quality control, its lab is also equipped with a profiler, 2.5D image measurement capability, projector, surface roughness tester, optical microscopes, precise thread gauges, plus electronic micrometre and concentricity measurement tools. Able to work with different kinds of bar and tube stock, these include various types of steel, aluminium, alloy, brass, POM, Teflon, and other special materials as needed to meet with customer requests. Holding ISO 9001:2015 international quality certifications, HCT's parts

are trusted to provide service in everything from bicycles to medical equipment.

## EVERLIGHT CHEMICAL

**From keeping your carbon parts in top condition to ensuring your decals stay clear and bright, Everlight understands the chemistry behind material performance.**

Everlight Chemical is a pioneering specialty chemical company that's been devoted to improving polymer weatherability for more than two decades. Since then its premium UV absorbers and light stabilizer, Eversorb, has become a trusted brand across the automotive and architecture industries. Its products also have significant applications across the cycling sector. For example, a bike's frame and wheels might be made of carbon-fibre moulded with epoxy to achieve a low weight and high physical strength. However, epoxy resin is naturally degraded under long-term UV exposure, which will eventually cause it to weaken. Everlight's unique Eversorb CP product enhances the weatherability of epoxy resin, helping maintain its rigidity and physical strength. Great news for the long-term durability of your bike. Similarly, the bright organic fluorescent coatings widely applied in water-

transfer printing stickers, footwear, and textile manufacturing are also easily degraded by light exposure, resulting in discolouration and loss of fluorescence. Targeted to this application, Everlight's Eversorb FP series is specially designed for fluorescent coatings and can effectively protect polymers against light degradation, delaying loss of

fluorescence and gloss, and extending the products' life cycle. Ensuring products continue to look and function at their best for longer. With a dedicated professional technical support and R&D team, they're ready to help cycling industry producers harness the power of chemistry to better their products.

## GOGORO

**Gogoro's radical self-contained wheel combines battery, sensors, and drive functions to slot seamlessly into your existing designs.**

The Gogoro Eeyo Smartwheel is an all-in-one electric drive that leverages the company's technical experience to integrate a motor, battery, sensors, and smart connectivity into a compact self-contained rear bike hub. With intelligent power assist, the Eeyo Smartwheel detects the rider's effort via a state-of-the-art torque sensor and delivers the exact power needed for a fast, natural ride. This effortless performance is complemented by an easy to use mobile app. With all the components integrated into the hub, it's also simple to add to existing frame designs. Part of the well-known Gogoro battery swapping and Smartscooter business, the 15-person Eeyo team spent three years developing the Smartwheel and Eeyo 1 bikes. Setting out to imagine new e-bike designs free from the limits of multi-component drivetrains, the team's work remains ongoing. Part of this includes regularly releasing fresh OTA updates to improve performance and add new features to its existing products. Following the successful launch of this first key design, the team is now working with brands and OEM partners keen to use the Eeyo Smartwheel to electrify their bikes. In addition to showing the wheel and Eeyo 1 bike at the Taipei Cycle Show, the brand will also be previewing early-stage development projects from a few of these partners.

## PENTALOCK

Can a simple lock be simultaneously the world's most secure and most convenient? If you ask the two founders of PentaLock, Thomas and Emil, the answer will be a loud yes. Since inventing the smart lock in 2016 with a vision to stop bike theft altogether, the company has focused on innovation, convenience, and increased security to create a sustainable solution to prevent bike thefts. With seasoned investors on board, the company has grown rapidly over the last year and is now ready to reach the global market.

Built around the bottom bracket, the PentaLock unit includes locking, alarm, and several other smart features. To unlock the bike, all the bike owner has to do is push the button on the key, just like remote unlocking on a car key fob. The product works as both a mechanical immobilizer and for e-bikes as an electronic immobilizer. Mechanically this simply locks the pedals in a fixed position leaving

the bike useless when activated. However, on e-bikes, the lock connects to the whole electrical system and completely disables the e-bike's motor, controller, and display when locked. To achieve this, the unit is integrated into the bike during the manufacturing

process, which means the lock cannot be removed after being mounted on the bike. Allowing bikemakers to build-in significant added value to their machines, PentaLock is hoping existing manufacturers will see the value of helping secure their customer's bikes.

## POLISPORT GROUP

**From child seats to trailers, Polysport aims to put bikes at the heart of family life**

A worldwide leader in child bike seats that also specialises in bicycle and off-road motorcycle accessories. Polysport Group has a solid market presence manufacturing products across multiple two-wheels industries. Recently the group has launched a new brand division known as Polysport Move. Linked to the company's strategy to focus on mobility and transport

products, this intention has been accelerated by the current pandemic situation. Focused on the launching of new products that favour family transportation and mobility, the design of these will also aim to privilege both sustainable processes and materials. At this year's show, the brand will be bringing several of these new products, including the Polysport Trailer. Giving the family the ability to go out and safely cruise together, it's suitable for children from nine-months up to six-

years. Able to transport one or two kids on the cockpit, plus a small cargo via the back trunk, folding up its seat will also allow users to take advantage of the trailer's full cargo capacity. Also convertible into a stroller, it's incredibly versatile. Partnering with the MIK brand, Polysport will also be showing its Bubby child seat. Incorporating the new MIK HD adapter plate, this makes it 100% compatible with the huge number of carriers that already incorporate this secure mounting system.

# SHOW DAILY

Official Newspapers of Taipei Cycle & Eurobike

**Due to the COVID-19 pandemic, we will be moving online for Taipei Cycle 2021.**

Since 2008, the Show Daily has been the official daily newspaper at the world's leading trade fairs for the bike industry. Starting in January, you can reach customers that cannot attend the show via our online news site.

## LAUNCH OFFER: FIRST MONTH FREE

Get the first month free when you book a 3-month online package.

## CONTACT US

**...and find  
a deal that  
works for you.**
